AIR HANDLERS**

**MILLENNIUM™**

**ND360, 480 & 600**

**30 - 50 Ton  
60 Hertz**

**ND600 AIRHANDLER & M1CZ600 EVAPORATOR SECTION**

### Description

These air handling units are completely assembled units, including a well-insulated cabinet, a DX cooling coil with copper tubing, aluminum fins, expansion valve(s), distributor(s), 2" throwaway filters, a centrifugal blower, a blower motor contactor and a small holding charge of nitrogen.

Units are shipped in the vertical position ready for field installation, but can be easily converted to horizontal position.

## Air Handling Unit Features and Benefits

### Features

These air handlers can be arranged for a variety of air discharge patterns in either the horizontal or vertical position. Refer to the unit installation instructions for other application possibilities.

### Benefits

Air handling units are designed with two distinct modules to provide maximum application flexibility. ND360 and 480 Models are shipped as single packages with the blower module mounted on top of the coil module. The ND600 Blower Section and the M1CZ600 Evaporator Section are shipped separately and must be assembled on the job site. All blower modules can be repositioned in the field to meet a large number of vertical and horizontal applications.

The blower module includes the blower wheels and room for a field-mounted motor and drive. All models offer multiple motor horsepower and drive options to meet both standard and high static airflow requirements.

The coil module includes direct expansion coils, 2 in. throwaway filters, liquid line solenoid valves for capacity reduction, thermal expansion valves, distributors and a condensate drain pan.

Every air handling coil is pressurized with air and leak tested under water. After the headers are brazed onto the coil and the coil is installed in the unit, the coil is pressurized with nitrogen for pressure testing and additional leak testing. After the coil is evacuated and dehydrated, it is pressurized with a holding charge of nitrogen for storage and/or shipping.

These air handlers, combined with condensing units, provide years of quiet, efficient and dependable operation. These units are manufactured under ISO 9001 Quality System Certification.

### Unit Installation

Units may be bottom-supported or ceiling-suspended and can be arranged to meet almost any space or duct requirements. Each unit is available with a choice of blower motor horsepower, drive packages and other accessories to make them suitable for most applications.

Air Handling units are available in four pipe configurations from 30 to 50 tons. The dual circuit options provide a wide variety of application and unit match up possibilities.

**Blower Motors:** Different HP motors are available for each unit to meet almost any air delivery requirement. **5 thru 15 HP motors require motor overload protection.** All motors are UL approved, have permanently lubricated ball bearings and are field-mounted within the insulated cabinet of the units to minimize the transmission of sound to the surrounding space.

**Starters and Overload Heater Elements:** If the Air Handler is shipped with a motor starter, overload heater elements are required. See Kit details in Overload Heater Elements Table.

**NOTE:** All unit models with starter and overload heater elements, the power wiring for blower motor is field supplied.

**Contactors and Overload Relays:** If the Air Handler is shipped with a contactor, an overload relay is required. See Kit details in Overload Relays Table.

**NOTE:** All unit models with contactor and overload relays, the power wiring for blower motor is supplied in the overload relay kit.

### Factory-Mounted Components

**Part Load Operation:** These air handlers have multiple DX (Direct Expansion) coils with pre-piped distributors, expansion valves and solenoid valves. Field modifications are not required for part load operations. Capacity reduction not only provides economical operation, but also maintains stable temperature and humidity levels in the conditioned space.

**BAS Control:** York Commercial Comfort System (YCCS) provides split system integration for YCCS single zone, change-over bypass and VAV systems.

**Easy Service:** Serviceable expansion valves are provided on every unit. These valves are factory-installed to provide many years of trouble-free operation. If service is required, it is not necessary to unbrazed any joints. The expansion valves also include a tee fitting to allow easy installation of hot gas bypass if required.

**Coil Protection:** The indoor coils of these air handlers can have factory applied Technicoat coating to provide extended life to the indoor coil in standard applications and additional corrosion protection on those applications in sea coast or corrosive environments.

### Accessories

**Base Sections (30 and 40 ton):** Base sections can be used to elevate units above the floor. If desired, a moderate percentage of outdoor air may be introduced through these sections by cutting an access opening to accommodate the outdoor air duct connection. These bases include a durable finish to match the evaporator blower unit. The base may have to be insulated for certain applications.

**Hot Water Coils:** Drainable water coils are available for field installation between the blower and the coil modules of both horizontal and vertical units. Since their casings match the dimensions and the finish of the basic units, they become an integral part of the unit after installation. The coils slide out of their casings for easy installation. Hot water coils have copper tubes that have been mechanically expanded into aluminum fins. Both headers are located on the same end of the coil. Coils are leak-tested at 325 psig under water and dried before their connections are capped for storage and shipping.

**Steam Coils (30 ton only):** Steam coils are available for installation between the blower and coil modules of both horizontal and vertical units. Since the casing matches the dimensions and the finish of the basic unit, it becomes an integral part of the unit after installation. The coil slides out of the casings for easy installation and is pitched in the casings to facilitate condensate drainage. The coil has copper tubes that have been mechanically expanded into aluminum fins. Both headers are located on the same end of the coil. The

coil is leak-tested at 325 psig and dried before the connections are capped for storage and shipping.

## Guide Specifications

### MILLENNIUM™

#### Split System Air-Cooled Air Handler Models: NC300 and ND360, 480 and 600

##### General

Units shall be manufactured by Johnson Controls, Unitary Products Group in an ISO 9001 certified facility. These factory-assembled units include a well-insulated cabinet, a DX cooling coil with copper tubes and aluminum fins, expansion valve(s), distributor(s), throwaway filters, a centrifugal blower, a blower motor, an adjustable belt drive, a blower motor contactor and a small holding charge of nitrogen. The units are shipped in the vertical position ready for field installation. The air handler units can be installed for horizontal operation by reversing the position of the solid bottom panel with the return air duct flange on the front of the unit. The products must be tested per AHRI 340/360 and Underwriter Laboratories U.L. 1995 and carry CSA certification.

##### Description

The NC/ND indoor units are completely piped and wired at the factory and are shipped ready for immediate installation. Only the interconnecting liquid and suction lines, control wiring, and the main power wiring are required to complete the installation. Every coil is dehydrated, evacuated, leak tested and pressure tested at 450 psig before being pressurized with a holding charge of nitrogen for shipment and/or storage.

To eliminate the costly cabinet deterioration problems usually associated with outdoor equipment, all sheet metal parts are constructed of commercial grade (G90) galvanized steel. After fabrication, each part is thoroughly cleaned to remove any grease or dirt from its surfaces. The parts that will be exposed to the weather are then coated with a powder paint to assure a quality finish for many years. This coating system has passed the 1000-hour, salt spray test per ASTM Standard B117.

##### Unit Cabinet

Cabinet shall be constructed of 18 gauge, zinc coated steel, finished with a powder paint process capable of withstanding a minimum of 1000 salt spray hours according to ASTM B117. Cabinet screws shall comply with the ASTM B117 salt spray test for a minimum of 1000 hours. Panels shall be removable for easy access to all internal components during maintenance and service. A filter rack shall be included to accommodate 1" or 2" filters. Cabinet shall feature a separate access panel for the controls so that unit airflow

need not be disturbed during servicing. The NC300, ND360-480 units are shipped in the vertical position ready for field installation. The blower module can be repositioned in the field for maximum flexibility. The ND600 product ships with a separate M1CZ600A evaporator coil and can be assembled in the vertical or horizontal position in the field.

Each unit shall have:

- a. A steel angle frame to provide the rigid support required for shipping, rigging and years of dependable operation.
- b. Exterior panels of 18 gauge steel, finished with baked enamel to provide a long-lasting quality appearance.
- c. Removable panels to provide easy access to the internal components for maintenance and service.
- d. A filter rack with 1" or 2" filters.

##### Indoor (Evaporator) Fan Assembly

Fan shall be a belt drive assembly and include an adjustable pitch motor pulley. Job site selected brake horsepower shall not exceed the motors nameplate horsepower rating plus the service factor. Units shall be designed to operate within the service factor. Fan wheel shall be double-inlet type with forward-curved blades, dynamically balanced to operate smoothly throughout the entire range of operation. Airflow design shall be constant air volume. Bearings shall be sealed and permanently lubricated for longer life and no maintenance. Blower motors and drive kits are ordered separately. Power wiring for blower motor is field supplied.

##### Refrigerant Components

Coils:

- a. Evaporator coils shall have aluminum plate fins mechanically bonded to seamless internally enhanced copper tubes with all joints brazed.
- b. Evaporator coil shall be of the direct expansion, draw through design.

Refrigerant Circuit and Refrigerant Safety Components:

- a. Include factory-mounted distributors, adjustable thermal expansion valves and solenoid valves for both capacity reduction and refrigerant pump out on start-up.
- b. Include factory installed auxiliary side connectors for the addition of field installed hot gas bypass.
- c. Shall include filter/strainer to eliminate any foreign matter.

##### Controls

Unit controls shall include 208/230/460 or 575 volt transformer, blower motor contactor and relay, as well as a low voltage terminal block. Unit wiring shall be color-coded for easy service and trouble shooting.

**The Installer Shall:**

Furnish condensing units in accordance with the performance schedules shown on the plans. Install each unit as shown on the plans in accordance with the manufacturer's recommendations and all applicable national and local codes.

**Unit Operating Characteristics**

Unit shall be capable of starting and running at 125° F outdoor temperature, exceeding maximum load criteria AHRI Standard 360. The compressor, with standard controls, shall be capable of operation down to 40° F outdoor temperature.

**Electrical Requirements**

All unit wiring shall enter unit cabinet at a single factory provided location to minimize cabinet penetrations and avoid unit field modifications.

**Each Unit Shall Include The Following Accessories:**

- "Suspension kit
- "Return air grille
- "Hot water coil
- "Steam coil
- "Decorative base
- Metal skid
- "Wood skid

## Cooling and Heating Ratings

### Cooling Ratings

Outdoor Unit	Condensing Unit Only			Indoor Unit	System Cooling Capacity <sup>1</sup>			Rated Airflow (CFM)
	Gross Capacity <sup>2</sup> (MBH)	kW	EER		Gross Capacity <sup>3</sup> (MBH)	EER	IEER	
YD360	333	29.9	11.1	ND360	375	10.0	11.1	12,000
YD480	469	37.4	12.5	ND480	500	10.0	10.8	16,000
YD600	576	50.0	11.5	ND600	620	10.0	10.4	17,500

<sup>1</sup> Tested in accordance with the Unitary Large Equipment certification program, which is based on AHRI Standard 340/360.

<sup>2</sup> Condensing unit only ratings are at 45 F SST and 95 F entering-air temperature.

<sup>3</sup> Deduct 1 MBH when a unit operates at 208 volts.

EER = Energy Efficiency Ratio at full load - the cooling capacity in Btu's per hour (Btuh) divided by the power input in watts, expressed in Btuh per watt (Btuh/watt).

EER; condensing unit only ratings based on 45° F SST and 95°F entering outdoor air temperature.

IEER - A single number cooling part-load efficiency figure that is calculated based on equipment stages and EER at these capacity stages (ANSI/AHRI STD 340/360 - 2007)

#### LEGEND

EER = Energy Efficiency Ratio

SST = Saturated Suction Temperature

AHRI = Air Conditioning and Refrigeration Institute

IEER = Integrated Energy Efficiency Ratio

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh = 3.415 x kW and kW = BHP x 0.746 ÷ nameplate rated motor efficiency.

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh = 3.415 x kW and kW = BHP x 0.746 ÷ nameplate rated motor efficiency.

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

<sup>1</sup> These capacities are gross ratings. For net capacity, deduct supply air blower motor, MBh. Example: Refer to the appropriate Blower Performance Table for the BHP of the supply air blower motor, MBh = 3.415 x kW and kW = BHP x 0.746 ÷ nameplate rated motor efficiency.

<sup>2</sup> These ratings include the condenser fan motors and the compressor motors but not the supply air blower motor.

## Air Handling Unit and Hot Water Coil Accessory Heating Capacity

### ND360 / 1HW0406, ND480 & ND600 / 1HW0407<sup>1</sup>

UNIT MODEL	HOT WATER COIL MODEL	GPM	CFM	CAPACITY (MBH)				
				ENTERING WATER TEMPERATURE MINUS ENTRY AIR TEMPERATURE °F.				
				70	90	110	130	150
ND360	1HW0406	50	8,000	236	304	372	440	508
			10,000	265	341	416	492	568
			12,000	291	374	457	540	623
			14,000	315	405	495	585	675
ND480	1HW0407	75	12,800	348	447	547	646	746
			16,000	389	500	611	722	833
			19,200	425	547	668	790	911
ND600		75	16,000	389	500	611	722	833
			20,000	436	561	686	810	935
			24,000	473	610	746	882	1,019

<sup>1</sup> These capacities do not include any blower motor heat.  
NOTE: Temperature Water Drop (°F) = (2 X MBH) / GPM.

### Hot Water Coil Capacity Correction And Pressure Drop Vs GPM<sup>1</sup>

HOT WATER COIL MODEL	GPM	PRESSURE DROP PSI	CAPACITY CORRECTION FACTOR
1HW0406	25	0.4	0.79
	50	1.0	1.00
	75	1.8	1.04
	100	3.4	1.07
1HW0407	50	1.0	0.95
	75	1.5	1.00
	100	2.4	1.03
	125	3.5	1.05

<sup>1</sup> For pressure drop in feet (water), multiply these values by 2.31.

## Air Handling Unit and Steam Coil Accessory Heating Capacity

### ND360 / 1NF0454

UNIT MODEL	STEAM COIL MODEL	CAPACITY (MBH) @ 2 PSIG <sup>1</sup>				
		CFM	DRY BULB TEMPERATURE OF AIR ENTERING COIL (°F)			
			10	30	50	70
ND360	1NF0454	8,000	535	483	432	380
		10,000	592	535	478	422
		12,000	642	580	518	456
		14,000	687	621	555	489

<sup>1</sup> These capacities do not include any blower motor heat.

### Steam Coil Capacity Correction Factors For High Steam Pressure

STEAM PRESSURE (PSIG)	5	10	15	20	25
CAPACITY CORRECTION FACTOR	1.05	1.12	1.19	1.25	1.30

NOTE: Steam Rate = (lbs/Hr.) = 1.025 x MBH

	460	2MP04706400
	575	2MP04705500

<sup>1</sup> These units are equipped from the factory with a correctly sized motor starter, except for 15 hp 208V and 230V motor applications, in which cases a replacement motor starter will be provided with the overload heater element kit. Overload heater elements are not factory supplied. Only one kit is required per unit, as each kit contains three overload heater elements.

## ND 360, 480 & 600 Overload Relay Kit

VOLTAGE	208/230V	460V	575V
MOTOR HP	OVERLOAD KIT		
5	2MP04708500	2MP04708300	2MP04708300
7.5	2MP04708700	2MP04708400	2MP04708300
10	2MP04708900	2MP04708500	2MP04708400
15	2MP04709000	2MP04708700	2MP04708500

## ND 360, 480 & 600 Overload Setting

VOLTAGE	208/230V	460V	575V
MOTOR HP	OVERLOAD SETTING (Full Load Amps) <sup>12</sup>		
5	14/13	6.5	5
7.5	21/20	9.5	7.5
10	26/25	13	10
15	38/36	18	15

<sup>1</sup> Motors with Service Factor of 1.15 or Greater: Adjust overload relay dial to the motor nameplate Full Load Amps (FLA).

<sup>2</sup> Motors with Service Factor Less Than 1.15: Adjust overload relay dial based on the formula: Motor nameplate FLA x 0.90 = relay setting

## Static Resistance

### Static Resistance

Model	CFM	Hot Water Coil	Steam Coil
ND360	10000	0.08	0.11
	11000	0.09	0.14
	12000	0.10	0.17

	22000	0.24	-
	24000	0.28	-

## Sound Performance

### Indoor Sound Power Levels

Model (Tons)	CFM	ESP (IWG)	Blower		Sound Power, dB (10 <sup>-12</sup> ) Watts								
					RPM	BHP	Sound Rating <sup>1</sup> dB (A)	Octave Band Center line Frequency (Hz)					
			63	125				250	500	1000	2000	4000	8000
ND360 (30)	12000	0.75	755	5.66	86	84	84	82	81	81	77	74	69
ND480 (40)	16000	0.80	800	8.9	92	90	90	88	90	86	84	81	76
ND600 <sup>2</sup> (50)	20000	1.13	700	10.7	88	87	87	85	86	82	80	78	73

<sup>1</sup> These values have been accessed using a model of sound propagation from a point source into the hemispheric/free field. The dBA values provided are to be used for reference only. Calculation of dBA values cover matters of system design and the fan manufacture has no way of knowing the details of each system. This constitutes an exception to any specification or guarantee requiring a dBA value of sound data in any other form than sound power level ratings.

## Unit Connection Sizes

Model	ND360	ND480	ND600	M1CZ600A
<b>Dimensions (inches)</b>				
Length	100.1	103.1	103.1	103.1
Width	38.1	45.4	45.5	53.7
Height	74.7	89.4	45.4	54.4
<b>System Data</b>				
No. Refrigeration Circuits	2	2		2
Suction Line OD (in.)	1 1/8	1 3/8	-	2 1/8
Liquid Line OD (in.)	7/8	7/8	-	7/8
Power Wiring Knockout	7/8	7/8	1 3/8	-
Control Wiring Knockout	7/8	7/8	7/8	-
Drain Line	7/8	7/8	-	7/8
<b>Blower Outlet</b>				
Number	2	2	2	-
Width	19.0	19.0	24.9	-
Length	22.0	22.0	23.0	-
<b>Return Air Inlet</b>				
Width	33.2	40.5	-	49.5
Length	95.6	98.5	-	98.5

## Minimum Clearances

Top with Supply Air Opening <sup>1</sup>	24"
Front with Return Air Opening	24"
Right Side with access for Piping, Power & Control Wiring Connections <sup>2</sup>	24"
Left Side	24"
Rear <sup>3</sup>	N/A
Bottom <sup>4</sup>	N/A

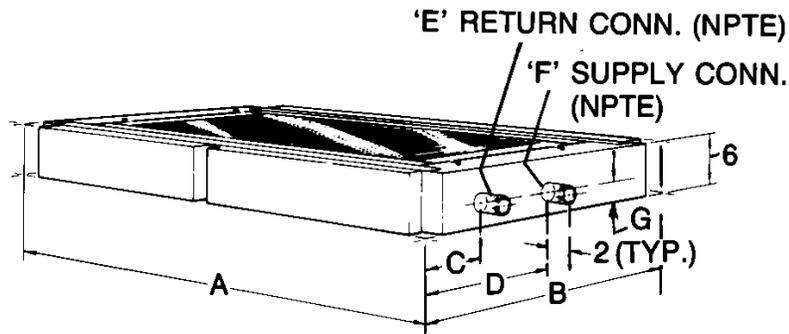

- <sup>1</sup> This dimension will vary if a supply air plenum or a base is used.
- <sup>2</sup> This dimension is required for normal installation and service.
- <sup>3</sup> Although no clearance is required for service and operation, some clearance may be required for routing the power and control wiring.
- <sup>4</sup> Allow enough clearance to trap the condensate drain line.

## Dimensions Hot Water Coil

### Dimensions Hot Water Coil

COIL MODEL	UNIT MODEL	DIMENSIONS					
		A	B	C	D	E	F

1NF0454	ND360	100-1/8	37-7/8	4-3/8	18-3/8	1-1/2	2	2-1/2

<sup>1</sup> Coils are field-installed between the evaporator coil and the blower section of the unit.

**Dimensions Base Section**

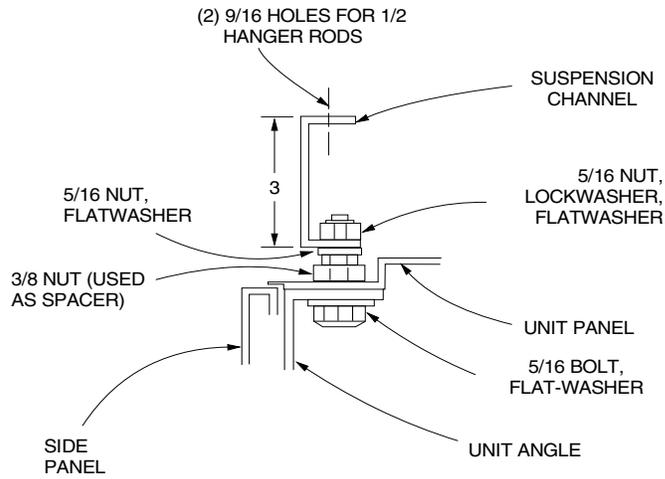

**Dimensions Base Sections<sup>1</sup>**

BASE MODEL	UNIT MODEL	DIMENSIONS	
		A	B
1BS0406	ND360	100-1/8	37-7/8
1BS0407	ND480	103-1/8	45-1/4

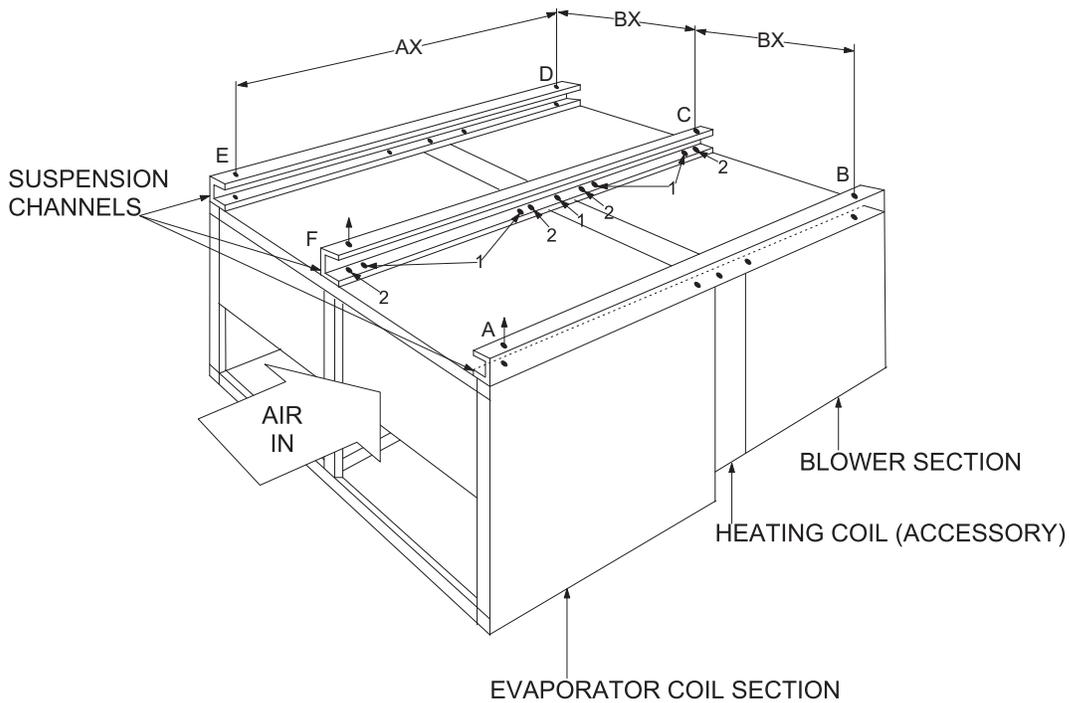

<sup>1</sup> Ventilation air can be brought into the unit through the base section providing the base section is fully insulated in the field.

*NOTE: The following illustration shows how the channels should be secured to the unit using the hardware provided with the suspension accessory.*

**ND360/ND480 Details For Securing Suspension Channels**

**ND600 & M1CZ600 Weight Distribution With Suspension Application**

## ND600 Mounting Detail

When arranged horizontally, the ND600 air handler and M1CZ600 evaporator coil can be suspended from joists with hanger rods using a suspension accessory.

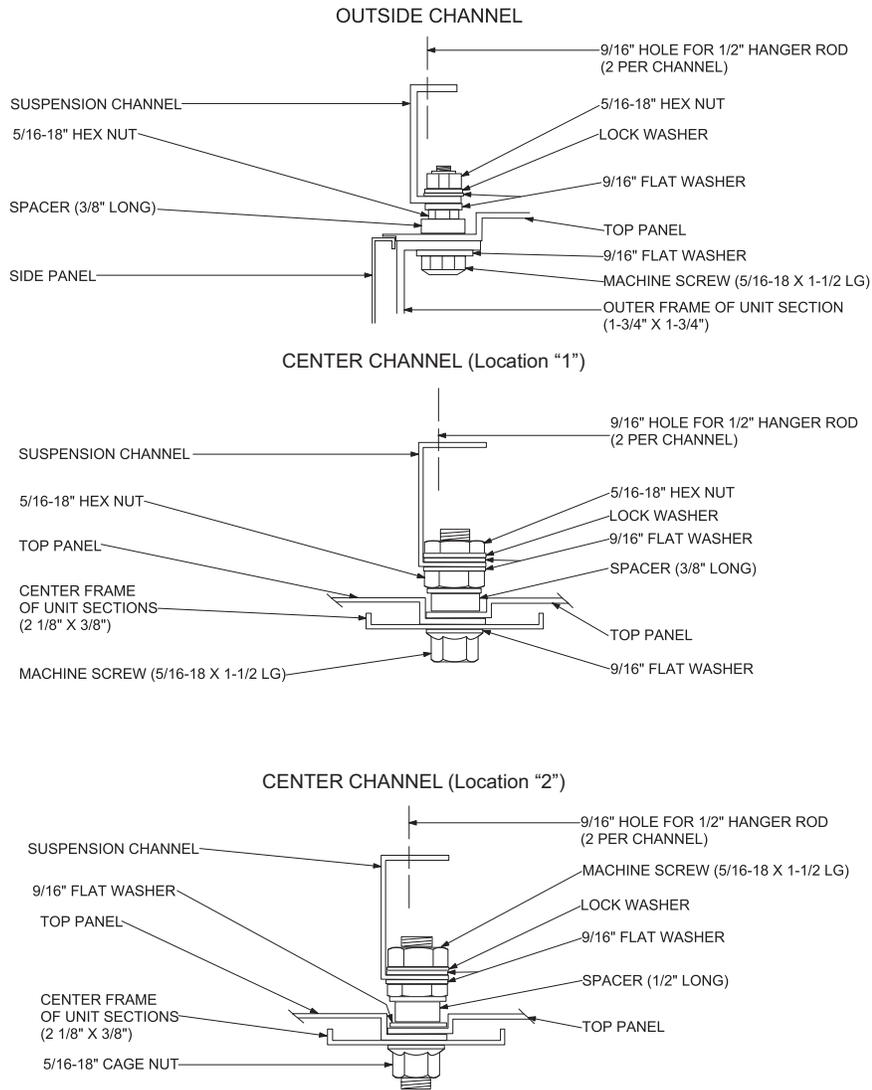

The suspension channels require no drilling or cutting. Each channel has enough holes in its bottom flange for:

1. Four bolted connections to the evaporator coil section. (Only two are used on the outside supports)
2. One bolted connection to the heating coil section.
3. Four bolted connections to the blower section. (Only two are used on the outside supports)

See Figure details for securing suspension channels.

When the heating section is not included, each channel will extend 3" beyond the front and the rear of the unit. Bolt holes in the bottom flange of each channel will still align with the holes provided in the top framework of the evaporator section and the blower section.

For both outside channels and for the Point 1 locations on the center channel, the bolted connections are to be made where the top sheet metal panels are attached to the unit framework. The ¼" screws and cage nuts must be removed and may be discarded. For the Point 2 locations on the center channel, the bolted connections are to be made through the knockouts in the top sheet metal panels. 5/16" cage nuts are provided in the unit framework under these knockout locations. Note that these cage nuts are part of the basic unit. They are not supplied with the suspension accessory.

### Typical Field Wiring Diagrams

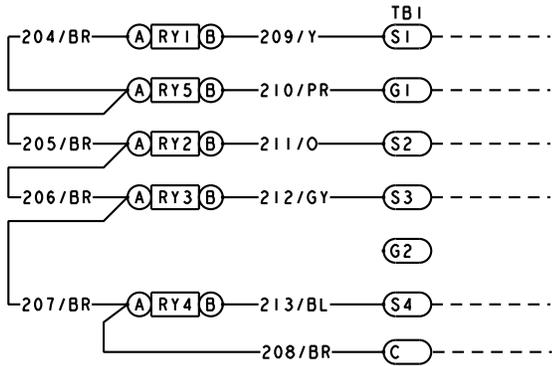

**Typical Field Wiring Diagram ND360/480 Evaporator Units, ND600 Air Handler and M1CZ600A Evaporator Coil when Matched with YD360/480/600 Condenser**

**NOTE:** On non ND evaporator models, isolation relays must be installed to avoid overloading on 75VA transformers on the condensing unit.

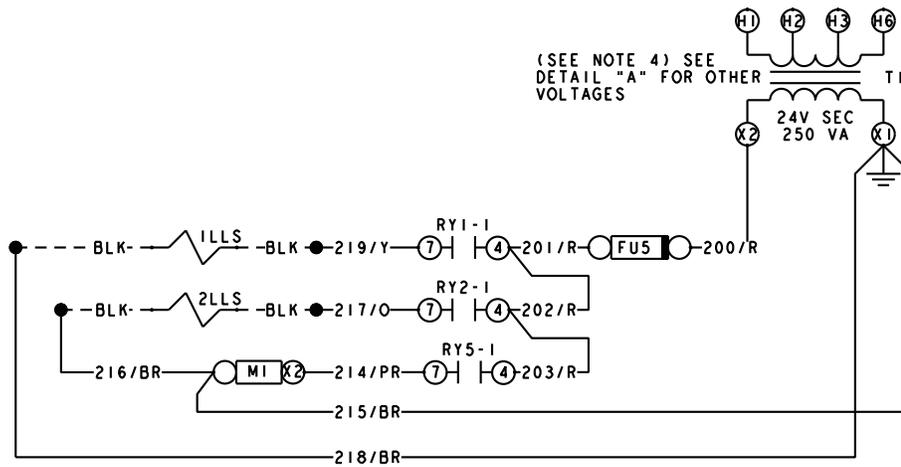

**Typical ND360/480 & M1CZ600A Liquid Line Solenoid**

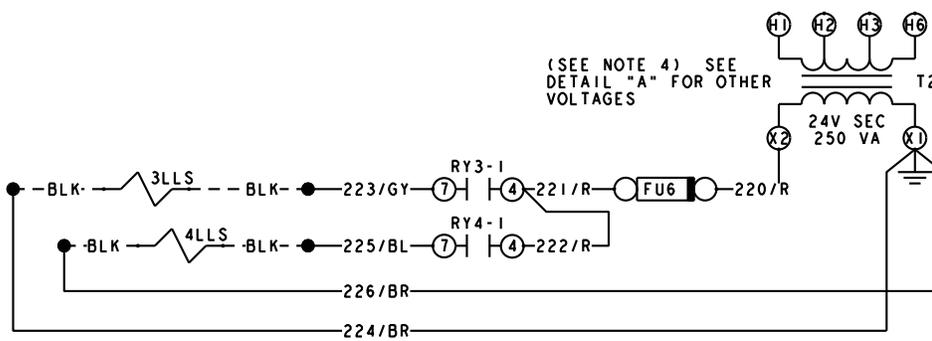

Standard Terminal Block on NC300, ND360/480 and ND600 with M1CZ600A models. On non NC/ND models isolation relays must be installed to avoid overloading on 75 VA transformer on condensing unit.

Primary side of transformer connect to line side of power supply.

Primary side of transformer connect to line side of power supply.

Non NC/ND units may not include any or all of the components required to wire the unit. Use the diagram as general reference only.
